Application/Control Number: 09/876,348

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-32, drawn to a recrystallization inhibition method for determining the presence, relative concentration and/or activity of thermal hysteresis proteins, classified in class 435, subclass 7.1.
- II. Claim 33, drawn to a method for providing quantitatively assessing the extent of recrystallization in frozen foods and the impact of solution additives, classified in class 514, subclass 2.
- III. Claim 34, drawn to a method for quantitatively assessing and comparing the effectiveness of cryoprotective solutions, classified in class 435, subclass 6+.
- 2. The inventions are distinct, each from the other because of the following reasons:

The methods of Inventions I-III are separate and distinct because the methods encompass different outcomes and method steps. For example, the methods of Inventions II and III require a quantitative assessments leading to different end points/measurements and the method of Invention I is determining the presence of a product. In addition, the method of Invention I is a screen to determine the presence of the protein and the methods of Inventions II and III require the protein to already be present and having a desired effect.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, the inventions have acquired a separate status in the art as a separate subject for inventive effect and require independent searches. The search for each of the above inventions is not co-extensive particularly with regard to the literature search.

Application/Control Number: 09/876,348

Art Unit: 1653

A reference, which would anticipate the invention of one group, would not necessarily anticipate or make obvious the other group. Moreover, as to the question of burden of search, classification of subject matter is merely one indication of the burdensome nature of the search involved.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, election of a single group for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hope Robinson whose telephone number is (703) 308-6231. The examiner can normally be reached on Monday-Friday from 9:00 am to 6:30 pm (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher S. F. Low, can be reached at (703) 308-2923.

Any inquiries of a general nature relating to this application should be directed to the Group Receptionist whose telephone number is (703) 308-0196.

Application/Control Number: 09/876,348

Art Unit: 1653
